Technical drawing of a rectangular cut-out in a wall. The cut-out is 810mm wide and 410mm high. It shows a double-paneled door or shutter with a handle. The wall is labeled 'AS' at the top and bottom. The cut-out is labeled 'Cut-out 810mm' and 'Cut-out 410mm'. A detail 'AT' is shown in the top right corner of the cut-out.

### Wall cut-out dimensions

It is possible to change **the burner unit**, if you want to upgrade your fireplace from a manuel burner to an electrical burner

If only a manual burner is required, the recess is: W=150mm D=70mm  
By changing from manuel burner to electrical burner, the recess is: W=210mm D=150mm

Montreal - Open to front and back

## General Installation Guidelines for “decoflame® made to measure fireplaces”, open to two sides:

It is essential to maintain a 5mm gap all the way around the fireplace (Cut-out = Fireplace Dimensions + 10mm) This gap must not be sealed.

As the edges of the cut-out remain visible it is important that they are done to the highest possible finish. All four corners of the cut out must have exactly a 90 degree angle.

### Plasterboard walls - Stud-walls

All surfaces inside the wall cut-out are to be covered with fibre plaster sheets or other non-flammable materials.

### Stone/Brick walls

The cut-out is made according to the attached drawing.

### Important

Make sure to create a closed cavity for the section below the base plate of the fire and above the roof of the fireplace.

## Installation process

## Exploded view showing the installation process.

- Carefully secure the glass with included finger screws.  
**Important: See drawing for glassmounting by the customer**
- The body of the fireplace is centered in the wall cut out.  
Secured with the included fasteners.  
Depending on type the of wall use suited wall plugs.
- The burner is placed in the safety chamber.

IMPORTANT INFORMATION

Particulars of the wall in which the fireplace shall be installed

**DO NOT!** install the fireplace in a wall construction which is open above and below the fireplace. The warm air will cause turbulences inside this hollow construction which will have a negative impact on the flames.

**DO!** install the fireplace in an open-wall construction, which is closed above and below the fireplace. Make sure to create a closed cavity for the section below the base plate of the fire.

**DO!** install the fireplace in a massive wall (made of bricks, stone or gas beton) using the wall cut-out dimensions mentioned on the previous page.
